# WeRateDogs Twitter Analysis

we ratedogs

WeRateDogs is a Twitter account that posts and rates pictures of dogs, often with humorous and non-serious ratings with numerators higher than denominators. My analysis looked at WeRateDogs' archive as of August 1, 2017, using data provided by Udacity. Udacity also ran the images on WeRateDogs' account through a neural network to generate three predictions for each image. After cleaning the data to include only original content with images, I aimed to answer the following questions:
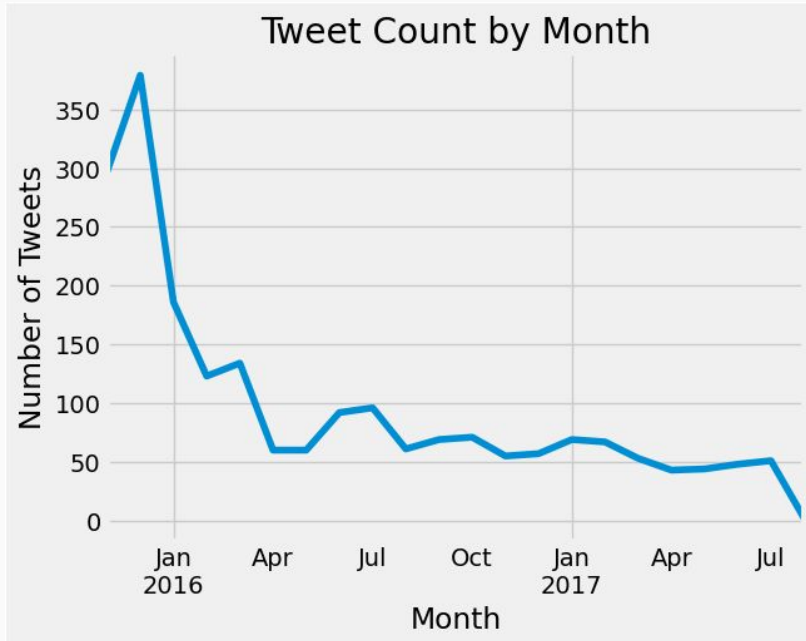

analysis of the dog rating

Dog ratings counts

This Histogram is heavily skewed right.
* the majority rating of dogs are obove 10.

Favorites and retweets analysis

Distribution of Favorites and Retweets Counts

Favorites and Retweets distributions follow the same pattern

analysis of the monthly trend of interactions with WeRateDogs's posts ?

Tweet Count by Month

the number of tweets has decreased since the creation of the account
